Roll, Twin Roll and Rollbatt

An effective range of loft solutions

ROCKWOOL Roll products provide effective, medium density thermal loft insulation, in thicknesses ranging from 100mm to 220mm.

ROCKWOOL Twin Roll is the only mineral wool loft insulation to offer two high performance solutions in one roll, saving on time, money and space.
Roll, Twin Roll and Rollbatt

Advantages

- Multi-application products
- Provides superb fit
- Outstanding thermal and acoustic properties
- Exceptional fire resistance
- Roll is easy to cut for use between joist spacings
- Rollbatt is pre-cut in 400 and 600mm widths
- Twin Roll can be used as a single 200mm layer over joists or separated for use as a 100mm roll between joists.

Standards and approvals

All ROCKWOOL Roll products conform to BS EN 13162:2012 ‘Specification for factory-made mineral wool products.’

Fire classifications

All ROCKWOOL Roll products achieve a reaction to fire classification of A1 as defined in BS EN 13501-1.

Packaging

Roll, Twin Roll and Rollbatt are supplied palletised and protected by a waterproof covering which allows the product to be stored outside.

Dimensions

Roll

ROCKWOOL Roll is manufactured at a width of 1200mm. The packaging provides cutting guidelines for 400mm or 600mm width requirements and the use of a long serrated blade will ensure that it is cut to the desired measurements. Roll is available in a range of 3 thicknesses, 150, 170 and 220mm.

Twin Roll

Twin Roll is manufactured as one 200mm roll, which has been pre-cut down the middle to create the option of 2 x 100mm rolls in one package.

Rollbatt

ROCKWOOL Rollbatt is supplied pre-cut to 400mm (x3) or 600mm (x2) widths in 100mm, 150mm and 170mm thicknesses.

Compatibility

All ROCKWOOL Roll products (Roll, Twin Roll and Rollbatt) will not react with any metal components in the loft, nor will it cause loss of plasticiser from PVC cables and pipes.

Performance

Thermal

ROCKWOOL Roll, Twin Roll and Rollbatt products have a thermal conductivity (k value) of 0.044W/mK.

Acoustic

The incorporation of ROCKWOOL Roll, Twin Roll or Rollbatt within suitably designed constructions provides improved levels of sound reduction.
Roll, Twin Roll and Rollbatt

U-values

Part L: 2013 edition requires new pitched roofs with loft spaces to achieve U-values of between 0.16 and 0.11 W/m²K. To meet this thermal performance and minimise heat loss through the timbers, ROCKWOOL Roll, Twin Roll or Rollbatt should be cross-layered between and over the ceiling joists.

The first layer (generally of 100 mm thickness) is rolled between the ceiling joists, which are normally spaced at 400mm or 600mm centres. A second layer of ROCKWOOL Roll/Rollbatt (e.g. 170 and 220mm thick) or Twin Roll (200mm thick) is then cross-layered to cover the first layer of insulation and the ceiling joists (see figure 1).

If upgrading loft insulation, check to see if any existing insulation material between joists is tightly butted to the sides of the timber. If not, remove and replace with new. If the existing insulation is in good condition, crosslayer this with a minimum of 170mm ROCKWOOL Roll/Rollbatt or 200mm Twin Roll.

Twin Roll

Laying 100mm Twin Roll between the joists and overlaying the joists with 200mm Twin Roll provides a U-value of 0.14 W/m²K which exceeds the minimum U-value of 0.16 W/m²K as required by building regulations.

Installation

- Water tanks: Insulation should not be placed directly under cold water tanks. Where access is required to water tanks etc, supports should be provided for a raised walkway.
- Loft hatches: To preserve the continuity of insulation, loft hatch covers should be insulated with a minimum 100mm thickness of ROCKWOOL Roll. Double-sided adhesive tape may be used to hold the insulation in place.
- Electrical Cables: The IEE Wiring Regulations, 17th edition and British Standard BS 7671: 2008 provide guidance on the correction factors to be applied in down-rating cables according to the situation.
- Each case should be separately assessed. Where possible, all cables should be lifted free of the insulation.

Specification clause

Thermal insulation to be ROCKWOOL Roll 600 or 400mm wide (delete whichever is not appropriate). The first layers fitted between ceiling joists ................. mm (insert 100, 150, 170, 200 or 220). The additional layer(s) ................. mm (insert 100, 150, 170, 200 or 220) to be cross layered over ceiling joists, with all joints to be closely butted.
Roll, Twin Roll and Rollbatt

Sustainability

As an environmentally conscious company, ROCKWOOL promotes the sustainable production and use of insulation and is committed to a continuous process of environmental improvement.

4 in 1

- Fire resistance
- Acoustic comfort
- Sustainable materials
- Durability

Environment

Made from a renewable and plentiful naturally occurring resource, ROCKWOOL insulation saves fuel costs and energy in use and relies on trapped air for its thermal properties.

ROCKWOOL insulation does not contain (and has never contained) gases that have ozone depletion potential (ODP) or global warming potential (GWP).

ROCKWOOL is approximately 97% recyclable. For waste ROCKWOOL material that may be generated during installation or at end of life, we are happy to discuss the individual requirements of contractors and users considering returning these materials to our factory for recycling.
