ROCKWOOL Group

We are the world leading stone wool manufacturer, with innovative products and systems, committed to protecting the environment and improving people’s life.

ROCKWOOL Group is a global leader in thermal insulation, providing world-class products and solutions to building structures. Our products help secure fire safety and reduce energy consumption of buildings, coupled with excellent performance in sound absorption, noise reduction and indoor comfort. ROCKWOOL provides green solutions for the horticulture industry, special engineered stone wool fiber for the manufacturing industry, as well as effective insulation solutions for refining and processing industries, marine and offshore industries and other areas. We also have acoustic and vibration reduction system for modern infrastructure construction.

ROCKWOOL Group has a major market share in Europe, but we have also actively expanded our market in Russia, North America, India and East Asia, with more production, sales and service activities operating locally. ROCKWOOL Group’s global network helps promote our products and systems around the world.

In China, ROCKWOOL provides a wide range of products for building insulation and other industrial areas that cater to different applications. We have more than 20 years of exploration and operation in China. ROCKWOOL stone wool is integrated with several excellent strengths: fire resilience, thermal properties, acoustic capabilities, durability and sustainability etc. Our products can stand the test of time. They protect buildings and people in any environment while reducing the carbon footprint. ROCKWOOL protects the environment and makes our society develop with a more sustainable approach.

ROCKWOOL China has stone wool production a site in Guangzhou with an annual capacity of 60,000 tons and subsidiaries located in Beijing, Guangzhou, Hong Kong, Taiwan, Philippines and other major cities at present.

ROCKWOOL Group

38 countries with business operation

28 stone wool factories in production

10,500 employees around the world

80—1,500 times

Ratio between energy saved during product life against energy used for production per unit is 80-1,500 times
**Stone Wool External Thermal Insulation Composite System**

Stone wool ETICS is the non-load-bearing fire insulation system, with stone wool slabs as its core material which are fixed to the external walls by adhesive, anchor, etc. The system consists of stone wool insulation layer, fixation material (adhesives, anchors, etc.), rendering material (glass fiber mesh embedded, etc.) and finishing coat. With high fire-resistance rating, the system also has excellent performance in thermal insulation, as well as durability, safety and reliability.

**Applications**

Stone wool ETICS is suitable for new built and retrofit projects. It can be applied to frame, masonry and other building structures, and non-transparent curtain wall insulation system.

**Products**

ROCKWOOL FacadeRock
ROCKWOOL FacadeRock DD/DD Plus

**Features**

- Excellent thermal insulation performance, minimize thermal bridges;
- Class A1 non-combustible;
- Non-flammable and no toxic smoke;
- Good air permeability makes external wall “breathe free”;
- High tensile strength, good performance in resisting wind pressure, safe and reliable to use;
- Given same or higher strength and safety, the stone wool DD has lower density, which further reduces the weight and structural load with a lower cost;
- High water-repellency, low water absorption rate, good dimensional stability and durability;
- Excellent sound insulation and noise reduction, no corrosion to metal materials and building components;
- Easy to cut and saw;
- Non-toxic fiber, safe to use.

**Stone Wool Lamella External Thermal Insulation Composite System**

Stone wool lamella ETICS is a non-load-bearing fire insulation system, with stone wool lamella as its core material which are fixed to the external walls. The system includes insulation layer of stone wool lamella, fixation material (adhesives, anchors, etc.), rendering material (glass fiber mesh embedded, etc.) and finishing coat. With high fire-resistance rating, the system also has excellent performance in thermal insulation, as well as durability, safety and reliability.

**Applications**

Stone wool lamella ETICS is suitable for new built and retrofit projects. It can be applied to multiple building structures, such as frame and masonry. Low density and high strength make stone wool lamella especially suit to high-rise buildings. The material can also be used as fire resistant barrier for other external wall insulation systems, to fully improve the fire safety of external walls.

**Products**

ROCKWOOL RockBarrier (RB-L)

**Features**

- High tensile strength, excellent performance in resisting wind pressure;
- Excellent insulation performance, minimize thermal bridges;
- Class A1 non-combustible;
- Non-flammable and no toxic smoke;
- Excellent air permeability makes external wall system “breathe free”;
- High water-repellency, low water absorption rate, good dimensional stability, contributing to its durability;
- No corrosion to metal materials and building components;
- Light weight, easy to cut and saw;
- Non-toxic fiber, safe to use.

Ventilated Façade insulation System

Ventilated façade insulation system in this brochure refers to non-transparent curtain wall system with stone wool as its insulation material installed between the façade and a solid substrate such as concrete wall or brick wall to which the stone wool is mechanically fixed.

Applications
The system is suitable for both new buildings and energy saving retrofit projects. It can also be applied to multiple building structures, such as frame and masonry.

Products
ROCKWOOL VentRock 100
ROCKWOOL VentRock DD

Features
- Excellent thermal insulation properties, contribute to energy saving;
- Class A1 non-combustible, no toxic smoke;
- High tensile strength, suitable for dry hanging system;
- Remarkable air permeability makes the external wall “breath free”;
- High water repellency, low water absorption rate, good dimensional stability, contributing to its durability;
- No corrosion to metal materials and building components;
- Good acoustic and vibration damping property;
- Non-toxic fiber, safe to use.

Curtain Wall Fire Protection Insulation System

Curtain wall fire protection insulation system refers to the fire resistant insulation which stops fire and smoke from penetrating through construction structures in curtain wall systems. The system can bring curtain walls with good thermal insulation and excellent fire performance.

Applications
RockSafe series is used to seal any gaps in construction where smoke or fire may penetrate. Common applications include the isolation between building levels in curtain wall application. CurtainRock series is used as an insulation and fire resistance panel on the backpan of spandrel panel of the curtain wall system.

Products
ROCKWOOL CurtainRock
ROCKWOOL RockSafe

Features
- Class A1 non-combustible;
- Fire-resistance up to 2 hours;
- No corrosion to metal materials and building components;
- Good acoustic and vibration damping property;
- Non-toxic fiber, safe to use.

Light Steel Structure Insulation System

Light steel structure, often used in commercial and industrial buildings, is introduced to the residential buildings as well in recent years and becomes a promising trend of residential buildings. It has prominent advantage of easy handling and installation, good structural performance, excellent seismic resistant property and high floor area utilization. ROCKWOOL ThermalRock can be installed in the light steel wall frame, serving as a guardian to ensure fire safety, acoustics and water resistant performance. It is one of the most suitable insulation materials for light steel wall structure.

Applications
Light steel structure is one of important structures encouraged by government for prefabricated buildings, widely seen in commercial, industrial and residential buildings.

Products
ROCKWOOL ThermalRock S
ROCKWOOL Acoustic DD/DD Plus

Features
- Class A1 non-combustible;
- Low thermal conductivity and good thermal insulation;
- Remarkable air permeability, less moisture in the walls and indoor environment;
- No corrosion to metal materials and building components;
- Good acoustic and vibration damping property;
- Non-toxic fiber, safe to use.

Sandwich Panel Wall

The factory prefabricated stone wool sandwich panel with different surface outlook can be easily installed by fixing mechanically to building substrates or structures. The sandwich panel wall system acts as a building envelop which provides desirable outlook, reliable fire resistant property and durable thermal performance.

Applications
Sandwich panel external wall system is a good option for various commercial, public and industrial buildings, and can act as a fully-functional metal wall. It is also suitable for extension, reconstruction and temporary or mobile buildings. Thickness of stone wool sandwich panel is flexible to meet different requirements of fire and thermal resistance in projects.

Products
ROCKWOOL ConRock
ROCKWOOL StrucRock

Features
- Class A1 non-combustible, no toxic smoke;
- Excellent compressing, stretching and shearing resistance
- Low thermal conductivity, superior thermal insulation;
- Remarkable air permeability, less moisture in the walls and indoor environment;
- Good acoustic and vibration damping property;
- Non-toxic fiber, safe to use.

Product Range
CR Series offers two types of products: L-Series is supplied by pre-cut lamella, S-Series by thick slab for customers with cutting equipment.

Steel Deck Flexible Waterproof Membrane Roof

Steel deck flexible waterproof membrane roof is a single skin membrane roof system with stone wool as its insulation material mechanically fixed on to a steel deck.

Applications
The system is an ideal solution for commercial and industrial buildings, especially for new built and retrofit of steel structure roofs.

Products
ROCKWOOL HardRock;
ROCKWOOL RoofRock;
ROCKWOOL TopRock DD/DD Plus;
ROCKWOOL TopCover.

Features
- Class A1 non-combustible, heat resistant up to 1000°C, effective in preventing the spread of fire with no toxic smoke or gas produced;
- Excellent resistance to point load and compression, able to bear all types of loads;
- Low thermal conductivity, superior thermal insulation;
- Good dimensional stability, no shrinking, bending or deforming over time, applied as the most stable base layer material, protecting waterproof material from any undesirable pressure;
- Given the same compression strength, TPR-DD/DD Plus has a lower density, reducing the structural load while offering a higher point load;
- Good acoustic and vibration damping property;
- Non-toxic fiber, safe to use.

Concrete Deck Flat Roof

Concrete deck flat roof system refers to the roof system with concrete deck as substrate, stone wool as insulation and flexible membrane or bitumen as waterproof layer on surface.

Applications
The system applies to the construction or retrofit of concrete roofs in civil, commercial and industrial construction. Since concrete roof has a high heat storage capacity, stone wool insulation layer can create a comfortable environment with stable temperature.

Products
ROCKWOOL HardRock;
ROCKWOOL RoofRock;
ROCKWOOL TopRock DD/DD Plus;
ROCKWOOL TPR TopPlate and TPR Lamel;
ROCKWOOL TopCover.

Features
- Class A1 non-combustible, no toxic smoke;
- Excellent resistance to point load and compression, able to bear all types of loads, convenient for regular maintenance;
- Low thermal conductivity, superior thermal insulation;
- Good dimensional stability, not subject to different climates;
- Given the same compression strength, TPR-DD/DD Plus has a lower density, higher point load capacity, better protection of the entire roof system, leakage avoided;
- No partition layer needed between waterproof layer and stone wool insulation layer, compatible with various waterproof membranes;
- Good acoustic and vibration damping property;
- Non-toxic fiber, safe to use.

Metal Skin Roof

Single-skin and double-skin metal roofs are commonly seen in metal roof systems. In single-skin system, stone wool insulation is paved on an aluminum foil sheet on top of steel mesh which is attached to purlins. The metal roof skin is installed on top of the insulation. Double-skin metal roof is a system with vertical seam or aesthetic corrugated panel on top, stone wool as the insulation layer, and fixed to the profiled steel sheet at the bottom.

Applications
Metal skin roof is widely applied to the roof insulation of large public building, factory and warehouse.

Products
ROCKWOOL ThermalRock S

Features
- Class A1 non-combustible, no toxic smoke;

Pitched Tile Roof

It is a common application in the roofing construction which has a slope ratio of more than 10%. Tile roof system consists of roof substrate, stone wool insulation layer, waterproof liner layer and different types of tiles. The substrate is covered with stone wool insulation layer by adhesive mortar, which can also be installed with angle steel bars to hold the insulation material.

Applications
Tile roof usually has certain slope ratio which makes the design and installation differ from flat roof system. It is commonly found in low-rise and multi-floor residential buildings.

Products
ROCKWOOL ThermalRock S

Features
- Class A1 non-combustible, no toxic smoke;

Sandwich Panel Roof

The prefabricated stone wool sandwich panel, fixed to the purlin with fasteners, makes the whole system a water proof and thermal insulated roof with good mechanical strength. The system integrates thermal insulation with load-bearing, waterproof and aesthetic features, as well as remarkable fire resistance, light weight, high strength and convenience during the construction.

Applications
Stone wool sandwich panel is usually seen in roof systems of clean rooms, cold storage, electronic and industrial factories.

Products
ROCKWOOL ConRock
ROCKWOOL StrucRock

Features

Light Steel Keel Partition Wall System

Light steel keel partition wall system is a non-load-bearing system fixed on the light steel frame by gypsum boards or calcium silicate boards with stone wool filled in between. As a versatile system, it can be used as any non-load-bearing partition walls in the building. Light steel keel partition wall system has been most widely used, with a wide range of excellent features such as light in weight, good sound insulation, fireproof performance and easy construction.

Applications
Widely used in a variety of internal partition walls, such as offices, shopping centers, cinemas, hotels, entertainment centers, reading areas, bedroom, etc., can create a comfortable and quite indoor environment, but also very suitable for building reconstruction or expansion transformation and so on.

Products
ROCKWOOL ThermalRock S
ROCKWOOL Acoustic DD/DD Plus

Features
- Light in weight, good acoustic property, excellent fire protection, easy construction;
- Class A1 non-combustible, fire resistant up to 1000°C;
- Water repellent, moisture avoided;
- High strength, convenient for installation;
- High dimensional stability, even under high temperature of fire;
- Excellent air permeability, no corrosion to metal materials and building components;

Sandwich Panel Partition Wall

Stone wool sandwich panel is fixed to vertical keel in the process of horizontally installation, fixations on the top and at the bottom part of the panel are required. Additional finishing on sandwich panel is normally not required. The system is featured by fire protection, tidiness, aesthetics, as well as green, easy installation and recycling.

Applications
The sandwich panel acts as a fireproof and noise absorption partition or room division inside commercial, public or industrial buildings. The galvanized steel sheet on both sides of the sandwich panel makes it an ideal solution for buildings that have high hygiene standard and intactness requirements, such as facilities for food processing, medicine, electronics and chemical industries. Perforated sandwich panel can also be used in industrial and public space where high level of noise reduction is required.

Products
- ROCKWOOL ConRock
- ROCKWOOL StrucRock

Features
- Class A1 non-combustible, no toxic smoke;
- Excellent compressing, stretching and shearing resistance;

Floor Slab Insulation

Stone wool is filled into the wooden keels on the floor slab before flooring or paving other decorative materials to obtain a better thermal and acoustic performance. As a filling material, stone wool can effectively reduce floor noises while improving the floor’s performance in fire protection and thermal insulation.

Applications
It is an ideal solution for the thermal resistance and noise reduction between indoor floor slabs. The class A non-combustible stone wool insulation can also contribute to the fire safety while providing a comfortable work and living indoor environment.

Products
- ROCKWOOL ThermalRock S

Features
- Good performance in sound absorption, effective in reducing floor noise;
- Class A1 non-combustible, no toxic smoke;
- Low thermal conductivity, superior thermal insulation;
- Green and environmentally friendly, safe to use.

Product Range

| Thickness (mm) | 50, 75, 100 |
| Nominal density (kg/m³) | 40-140 |

Note: Please contact local sales representative for products of size not listed in the table.
Fire seal, Fire Door, Fire Segregation

Stone wool or a combination of stone wool and other non-combustible materials is installed in a building to form a passive fire protection system which prevent or slow down the spread of fire within the building.

Applications
Stone wool is widely used to seal holes and openings on walls, as a filling in fire doors, fireproof partitions, fire segregation installations and other building parts with strict fire resistant standard.

Products
ROCKWOOL Conlit H

Features
- Remarkable resistance to fire with a melting point higher than 1200°C and fire resistance lasting for 2 hours;
- Class A1 non-combustible, no toxic smoke;
- Remarkable air permeability;
- Excellent thermal insulation;
- No corrosion to metal materials and building components;
- Good acoustic and vibration damping property;
- Non-toxic fiber, safe to use.

Roof, Ceiling, Sandwich wall, Attic insulation

Stone wool is installed inside the roof, ceiling, sandwich wall, attic and other parts of building, providing fire protection, thermal and sound insulation. It is designed to create a better environment for living and working with enhanced fire safety.

Applications
It applies to building structures that requires sound, fire and thermal insulation, e.g. roof, ceiling, sandwich wall and attic.

Products
ROCKWOOL ThermalRock S

Features
- Class A1 non-combustible, no toxic smoke;
- Excellent compressing, stretching and shearing resistance;
